

AMENDMENTS TO THE SPECIFICATION

In the Abstract

Please amend the abstract as follows:

**~~SYSTEM AND METHOD FOR LIBRARY ROBOTICS
POSITIONAL ACCURACY USING PARALLAX VIEWING~~**

ABSTRACT OF THE DISCLOSURE

In one aspect and one example ~~of the present invention~~, a method for calibrating robotic picker mechanisms in automated storage library systems includes detecting a calibration mark with at least one sensor from a first position and a second position, where the first position and the second position are separated by an offset distance. Further, the method includes determining a shift in the calibration mark between the first position and the second position, and determining a distance between a reference position and the calibration mark based on the shift in the calibration mark, the offset distance, and the focal length of the sensor.
